Paper 2 Business Concepts 2

May/June 2026

MARK SCHEME

Maximum Mark: 60

Published

This mark scheme contains the instructions and marking guidance that our examiners used to mark candidate responses for this component.

Before they start marking, examiners complete a standardisation process. They review a range of candidate responses and discuss the mark scheme in detail to agree which answers can and cannot be accepted. Examiners award marks where it is clear that candidate responses have met the requirements of the mark scheme. These requirements may vary between different components or different versions of the same component, depending on the exact requirements of the question and the candidate responses seen during the standardisation process.

Sometimes, our mark schemes may allow marks to be awarded to responses which contain elements that are factually incorrect or for content not covered by the syllabus. We do this in response to the demands of a specific question to support candidates and make sure that our assessments are fair. However, these allowances should not be used as a guide for teaching and learning.

We cannot discuss the mark scheme with schools, and we recommend that schools read the mark scheme together with the assessment material and the Principal Examiner Report for Teachers.

This document consists of **35** printed pages.

General marking principles

All examiners must apply these marking principles when marking candidate responses.

1	Examiners must award marks for each response in line with: - the specific content defined in the mark scheme - the specific skills defined in the mark scheme or in the level descriptions - the standard of response required as exemplified by the standardisation scripts.
2	Examiners must award whole marks (not half marks, or other fractions).
3	Examiners must award marks positively . This means that: - marks are not deducted for errors or omissions - marks are awarded for correct/valid answers as defined in the mark scheme and also for other valid answers which go beyond the scope of the syllabus and mark scheme referring to your team leader as appropriate - the quality of spelling, punctuation and grammar are judged only when the mark scheme indicates that these features are specifically assessed in the question. However, the meaning of all responses must be unambiguous.
4	Examiners must consistently apply the requirements of the mark scheme and any rules for what to do when candidates have not followed instructions correctly.
5	Examiners must use the full range of marks defined in the mark scheme, unless limited by the quality of the candidate responses seen.
6	Examiners must award marks according to the mark scheme and must not award marks with grade thresholds or grade descriptions in mind.

**Social Sciences-Specific Marking Principles
(for point-based marking)****1 Components using point-based marking:**

- Point marking is often used to reward knowledge, understanding and application of skills. We give credit where the candidate's answer shows relevant knowledge, understanding and application of skills in answering the question. We do not give credit where the answer shows confusion.

From this it follows that we:

- a** DO credit answers which are worded differently from the mark scheme if they clearly convey the same meaning (unless the mark scheme requires a specific term)
- b** DO credit alternative answers/examples which are not written in the mark scheme if they are correct
- c** DO credit answers where candidates give more than one correct answer in one prompt/numbered/scaffolded space where extended writing is required rather than list-type answers. For example, questions that require n reasons (e.g. State two reasons ...).
- d** DO NOT credit answers simply for using a 'key term' unless that is all that is required. (Check for evidence it is understood and not used wrongly.)
- e** DO NOT credit answers which are obviously self-contradicting or trying to cover all possibilities
- f** DO NOT give further credit for what is effectively repetition of a correct point already credited unless the language itself is being tested. This applies equally to 'mirror statements' (i.e. polluted/not polluted).
- g** DO NOT require spellings to be correct, unless this is part of the test. However spellings of syllabus terms must allow for clear and unambiguous separation from other syllabus terms with which they may be confused (e.g. corrasion/corrosion)

2 Presentation of mark scheme:

- Slashes (/) or the word 'or' separate alternative ways of making the same point.
- Semi colons (;) bullet points (•) or figures in brackets (1) separate different points.
- Content in the answer column in brackets is for examiner information/context to clarify the marking but is not required to earn the mark (except Accounting syllabuses where they indicate negative numbers).

3 Calculation questions:

- The mark scheme will show the steps in the most likely correct method(s), the mark for each step, the correct answer(s) and the mark for each answer
- If working/explanation is considered essential for full credit, this will be indicated in the question paper and in the mark scheme. In all other instances, the correct answer to a calculation should be given full credit, even if no supporting working is shown.
- Where the candidate uses a valid method which is not covered by the mark scheme, award equivalent marks for reaching equivalent stages.
- Where an answer makes use of a candidate's own incorrect figure from previous working, the 'own figure rule' applies: full marks will be given if a correct and complete method is used. Further guidance will be included in the mark scheme where necessary and any exceptions to this general principle will be noted.

4 Annotation:

- For point marking, ticks can be used to indicate correct answers and crosses can be used to indicate wrong answers. There is no direct relationship between ticks and marks. Ticks have no defined meaning for levels of response marking.
- For levels of response marking, the level awarded should be annotated on the script.
- Other annotations will be used by examiners as agreed during standardisation, and the meaning will be understood by all examiners who marked that paper.

Annotations guidance for centres

Examiners use a system of annotations as a shorthand for communicating their marking decisions to one another. Examiners are trained during the standardisation process on how and when to use annotations. The purpose of annotations is to inform the standardisation and monitoring processes and guide the supervising examiners when they are checking the work of examiners within their team. The meaning of annotations and how they are used is specific to each component and is understood by all examiners who mark the component.

We publish annotations in our mark schemes to help centres understand the annotations they may see on copies of scripts. Note that there may not be a direct correlation between the number of annotations on a script and the mark awarded. Similarly, the use of an annotation may not be an indication of the quality of the response.

The annotations listed below were available to examiners marking this component in this series.

Annotations

Annotation	Meaning
	For objective points that are right or wrong.
	For objective points that are wrong.
	When there is a misunderstanding in a response.
	When the candidate has attempted something, but the mark/skill has not been awarded.
Highlighter Or Underline	To highlight a point or section of an answer that justifies the mark/annotation.
	When the candidate has attempted something, and the mark/skill has been awarded.
On page comment	To communicate with the supervisor.
	When the context has not been used.

PUBLISHED

Annotation	Meaning
SEEN	To show a page/section has been seen/read.
NAQ	When the response is not focussed on answering the question.
REP	The repetition of a previous point in a response or candidate is copying the case study/data.
OFR	The own figure rule applies – acts as a mark/tick.
K	When AO1 has been awarded. Number of Ks should match the mark awarded.
APP	When AO2 has been awarded. Number of APPs should match the mark awarded.
AN	When AO3 at Level 1 has been awarded.
DEV	When AO3 at Level 2 has been awarded.
EVAL	When AO4 at Level 1 has been awarded.
E	When AO4 at Level 2 has been awarded.
EE	When AO4 at Level 3 has been awarded.

Use-of-highlighter:¶

Green	→ AO1	¶
Yellow	→ AO2	¶
Blue	→ AO3	¶
Black	→ AO4	¶
Pink	→ TV	¶
Red	→ incorrect	¶

Question	Answer	Marks
1(b)(ii)	AO2 Application Explanation of a limitation of using qualitative data to make marketing decisions APP (max 1 mark), including: • Non-numerical / narrative / descriptive data • Opinions, emotions and views • Detailed information • Examples of methods to collect qualitative data, e.g. interviews, focus groups, observations • Examples of ways to record qualitative data, e.g. transcripts, content analysis to condense raw data into categories or themes Context applied to CC APP (max 1 mark), including: • Sales of Cherry cola reduced by 12% over past year • Using market research data to investigate the reasons for the decline in sales • Aim to increase sales • Market leader in country N • Manufactures four variants of cola drink • Four factories in country N <i>Application must be made to CC and cannot be generic</i> Accept all valid responses.	

PUBLISHED

Question	Answer			Marks
1(b)(ii)	Exemplar and annotations	Mark	Rationale	
	A limitation is that the data may be time consuming to analyse K , due to the variety of different responses APP delaying the manager's decision about a marketing campaign APP .	3	Time consuming to analyse is a reasonable limitation K , explained in relating to the variety of responses APP and in the context of CC APP .	
	The sample size is often smaller K , so data collected may unrepresentative APP to find out why Cherry cola sales are fallen by 12% APP .	3	Small sample size K so data may unrepresentative is a second AO1 point for APP . This answer is then applied to CC for three marks in total.	
	Non-numerical data about opinions/views APP which are subjective K .	2	Subjectivity is K . The answer includes a relevant example of a feature of qualitative data APP , but only one mark as no application to CC's context.	
	Graphs and charts cannot be produced K .	1	Inability to create graphs/charts is a relevant limitation for K , but it hasn't been explained.	
	As market leader CC has a high marketing budget TV .	0	Although there is some relevant context, there is no knowledge of a limitation of using qualitative data, so no marks can be awarded.
